

CURTAINS PROVIDE PRIVACY. AND PATHOGENS.

92% of privacy curtains have been found contaminated one week after laundering.¹
Fortunately, you can kill 99.9% of bacteria on soft surfaces in 30 seconds.

Disinfecting hard surfaces is only half the battle.

In healthcare environments, soft surfaces — like privacy curtains, chairs and couches — can be carriers of HAI-causing pathogens. Dangerous bacteria can survive up to 90 days² on fabric, putting patients, families and staff at risk.

Now, a solution for soft surfaces.

Clorox Healthcare® Hydrogen Peroxide Cleaner Disinfectants are EPA-registered to disinfect hard surfaces and kill 99.9% of bacteria on soft surfaces*. Finally, a single solution for all surfaces — to help you kill infection-causing pathogens wherever they may be.

For your free sample, visit cloroxhealthcare.com/softsurface.
